DYNAMIC ABUTMENT SOLUTIONS

In Dynamic Abutment Solutions we are devoted to the design, manufacture and marketing of products in the field of **implantology** and **dental prostheses**.

In our R&D&l centre, our **own technology** is developed to improve dental prosthesis manufacturing processes with the aim of providing innovative solutions that optimise workflows, both in terms of quality and profitability.

We also have extensive experience in the dental market: we offer **digital solutions** adapted to the various emerging technologies and guarantee high quality standards recognised by the most demanding customers.

We started our activity with the launch of the innovative **Dynamic Abutment**, conceived to modify the angulation of implants in the placement of dental prostheses. This product became a **market benchmark** for its contribution to solving positioning problems and improving the aesthetics and functionality of dental prostheses.

More than 20 years of experience have enabled us to remain a world leader in this field. In addition, we have developed a broad portfolio of abutments, products and digital resources focused on new lines of implantology for both **clinics** and **dental laboratories**.

DYNAMIC SYSTEM MILLING STRUCTURES

The Screwdriver set of 3.0 Dynamic Abutment System is used in those cases in which **rectification of the entry of the screw** due to an unfavorable position of the implants is necessary, improving the functionality and aesthetics of the milled prosthesis.

More than 1.500.000
cases solved with
DYNAMIC SYSTEM

DYNAMIC SCREWDRIVER

Screwdriver with hexalobular head, exclusively to the 3.0 Dynamic Abutment system.

Lengths: 18, 24, 32 mm.

PATENT NUMBER
Dynamic Screw
US 2020/15942

Dynamic screws covers the majority of the thread metrics available on the market. They are used with the Dynamic TiBase or milled structures with an angled screw channel. There are **several lengths** for each metric to ease adaptation to the structures. All of them are made of Titanium grade V.

Our screwdriver has a **contra-angle** connection to make it easier to use with a dynamometer or manual ratchet, with the corresponding adaptors or handles.

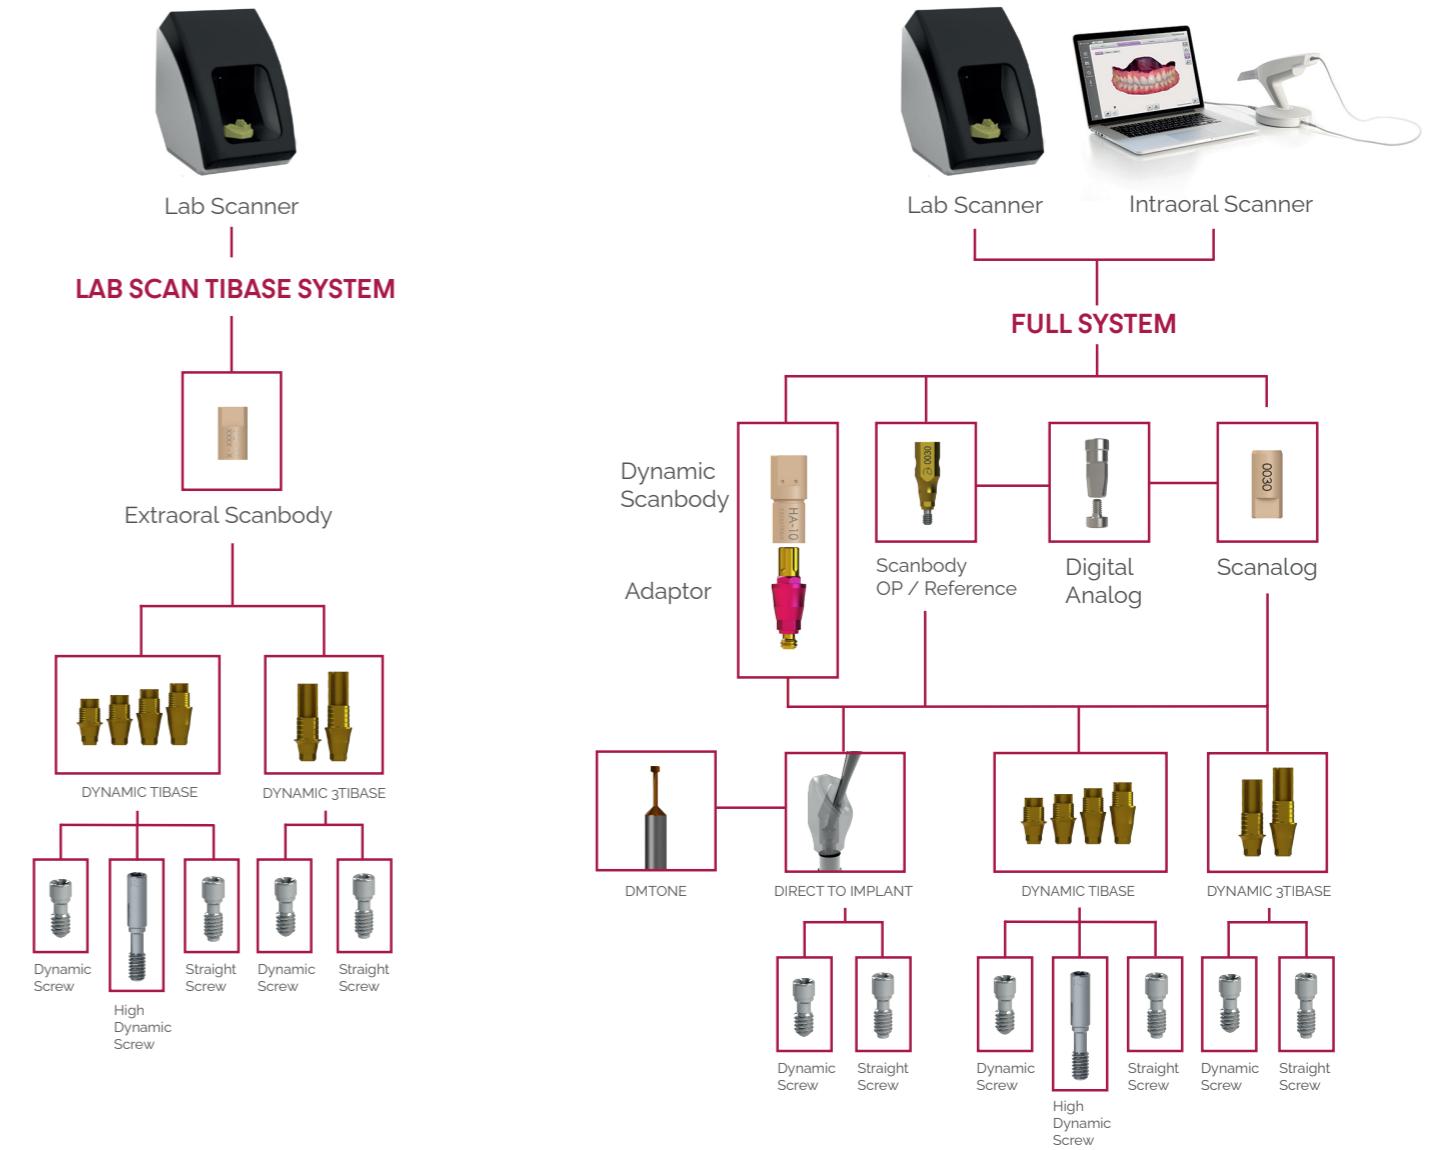

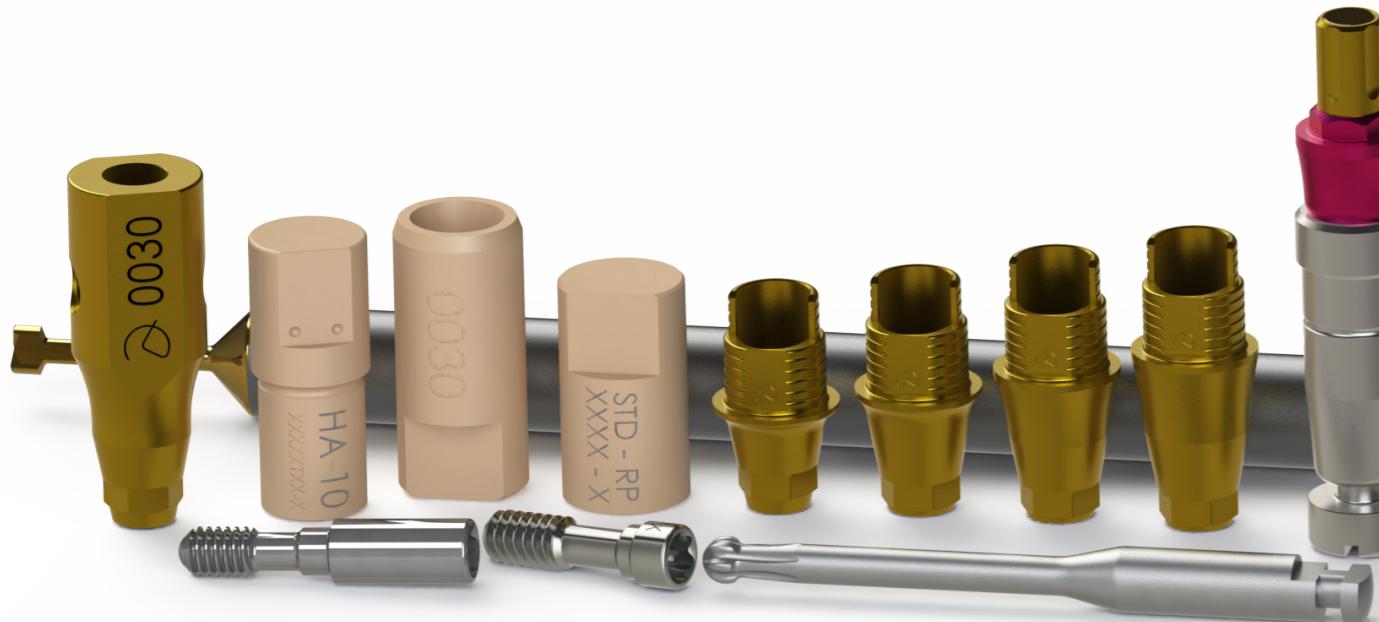

PATENT NUMBER
Dynamic Screwdriver
EP 3 260 079

HIGH DYNAMIC SCREW

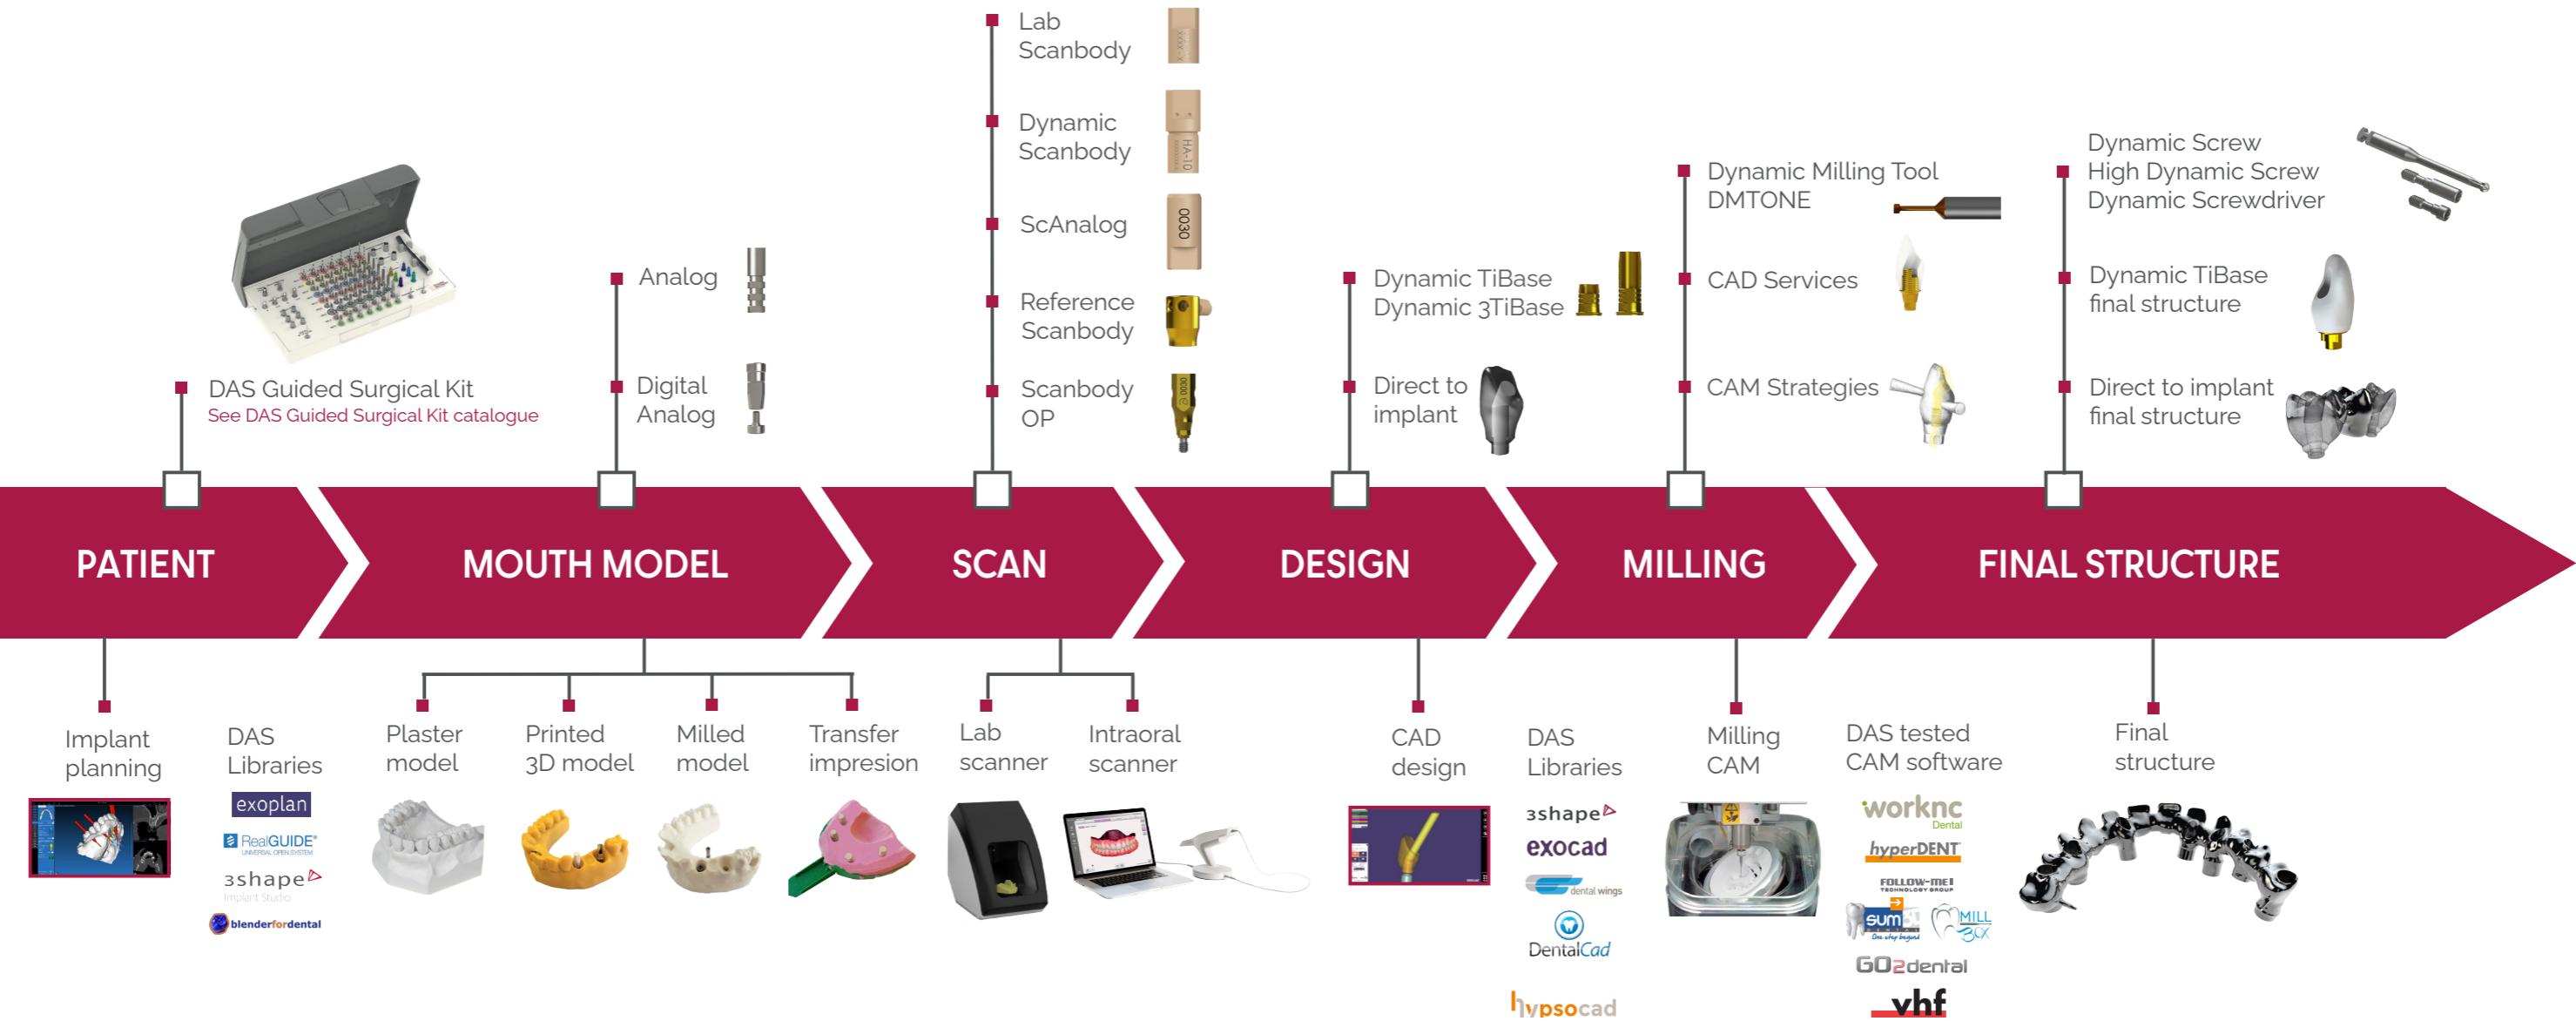

DYNAMIC SCREW

All screws are perfectly identified with their batch and reference numbers, which allow each and every screw to be **traced** and **recorded** in the patient's card and in the clinical or laboratory records. Only the 3.0 Dynamic Screwdriver may be used to install them.

DYNAMIC DAS SYSTEM

CAD-CAM WORKFLOW

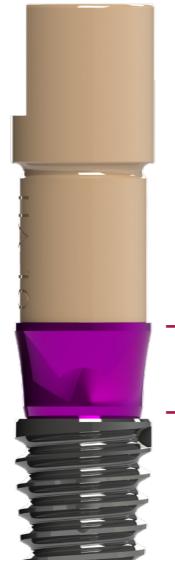

DYNAMIC SCANBODY & ADAPTOR

The scanbody detects the **position** and **orientation** of the respective dental implant or analog in CAD-CAM scanning procedures. There are **no holes** in the upper section which means the Z axis is free to improve scanbody scanning.

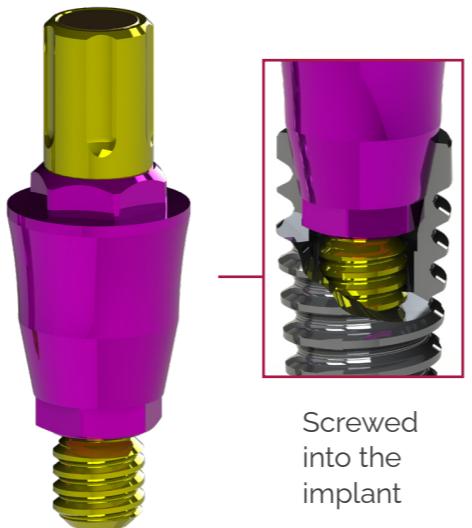

3 lengths

(8 mm, 10 mm and 12 mm) for the most complex scanbody reading cases.

SCANBODY OP

A single piece made of titanium placed at 10mm height from the implant. It features **two thread holes** to attach Peek Pins (if it is necessary). The DAS code is printed on the surface.

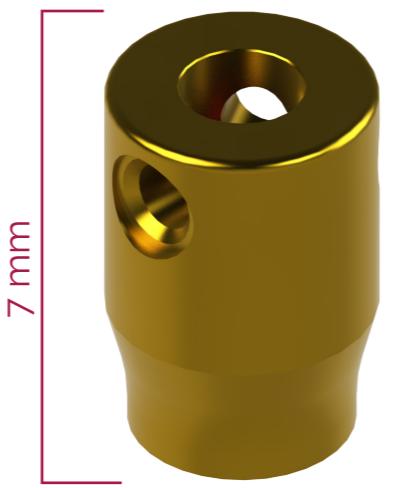

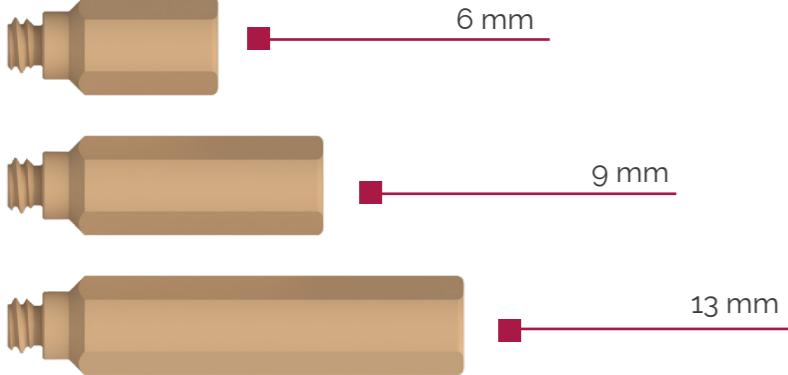

Implant level

REFERENCE SCANBODY & PEEK PINS

The Reference Scanbody is made of titanium and is designed to improve scanning for **edentulous cases**.

- Peek Pins can be used for **best scanning**
- The Reference Scanbody is compatible with different **Multi-Unit**

3 Peek Pins lengths

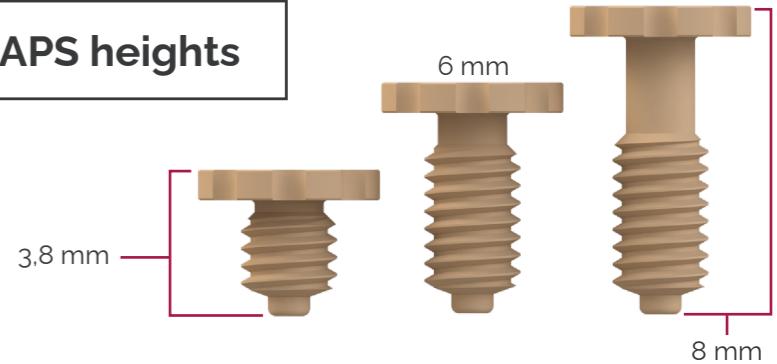

CAPS COMPLETE ARCH PILLAR SYSTEM

The Complete Arch Pillar System (CAPS) is made to improve **scan accuracy** and to **record maxilomandibular relationship** for the fabrication of a complete arch.

With the CAPS System we can finally close the Circle of **Digital Workflow** for a Complete Arch.

DYNAMIC TiBASE

Dynamic TiBases are a technological contribution to the digital treatment for the **angled systems development** using CAD-CAM. The Dynamic System includes the Dynamic TiBase, the Dynamic Screw-Screwdriver set, Scanbodies and Digital Libraries. Libraries are available for the main CAD softwares on the market: Exocad, 3Shape, Dentalwings, Dental Cad and Hypsocad.

TO CORRECT up to
ANGULATION 45°

Maximum angulation available for the first TiBase gingival height.

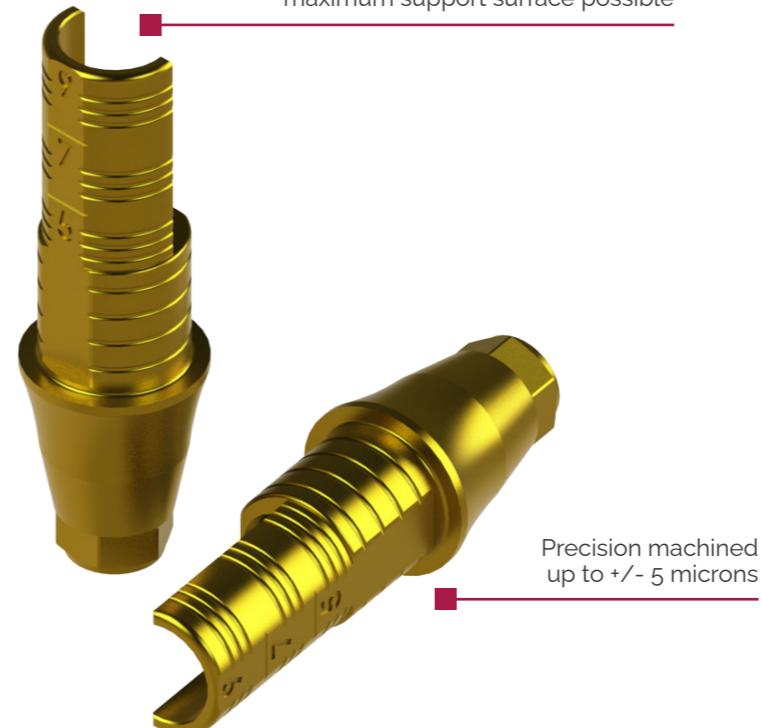

Maximum angulations for the rest of gingival heights under request.

DYNAMIC 3TiBASE

The Dynamic 3TiBase offers the possibility to work with different cement heights: 5, 7 or 9 mm. It is specially designed for the cases that require **higher height**. In this way, a greater support surface is achieved, the structure is stronger and more resistant so structure breaks by height decompensation between the TiBase and the structure are avoided.

To achieve the maximum strength of the structure it is important to have the maximum support surface possible

Scan with the Dynamic Scanbody or OP and cement the final piece onto the 3TiBase

If you do not have the Dynamic Scanbody, it is necessary to use the 4 mm TiBase and the Lab Scanbody to make the scanning. The final piece is cemented onto the 3TiBase
